Mobile: +91-7067349859

Email: anshika.saxena2023@ssipmt.com

PERSONAL DETAILS

- Current Location Raipur
- Date of Birth April 5, 2004
- Gender Female

SKILLS

- Python
- C Programming Language
- Data Structures
- Excel
- PowerPoint

LANGUAGES KNOWN

- English (Both)
- Hindi (Both)

CERTIFICATIONS

- IBM Applied AI Professional Certificate
- Coursera Google Cloud Platform Big Data and Machine Learning Fundamentals
- IBM Data Science Professional Certificate

TEST RANKS

- JEE Mains : 119986

RESUME SUMMARY

I am a passionate Computer Science student skilled in Python and Deep Learning. I aim to innovate AI-driven solutions like image captioning and recommendation systems, leveraging my strong foundation in programming and data analysis to contribute effectively in technology and research domains.

EDUCATION

Graduation

Course	B.Tech/B.E. - Bachelor of Technology / Engineering (Computer Science and Engineering (CSE))
College	Shri Shankaracharya Institute of Professional Management and Technology (SSIPMT), Raipur
Score	6.0%

Class XII

Board Name	CBSE
Medium	English
Year of Passing	2023
Percentage	60%

Class X

Board Name	CBSE
Medium	English
Year of Passing	2021
Percentage	75%

INTERNSHIPS

Saiket Systems, January 2026 - February 2026

- This internship was based on Python Development in which I've worked on multiple tasks using different tools of the language like to do list, basic file handling, web scraper and so on

PROJECTS

Image Caption Generator using Deep Learning, December 2025 - December 2025

- The project combines the strengths of deep learning in image recognition and natural language processing to create an intelligent system capable of generating captions automatically. The primary focus is on bridging the gap between visual data and textual understanding, ensuring that generated captions are not only accurate but also contextually relevant. This project leverages convolutional neural networks(CNNs) for extracting visual features from images and recurrent neural networks (RNNs), Eg Fparticularly LSTM models, to produce coherent textual sequences that describe the images

MOVIE RECOMMENDATION SYSTEM, July 2025 - August 2025

- This project's core is a content-based recommendation system, a type of machine learning model that provides suggestions based on an item's characteristics. Unlike systems that use user behavior, this one focuses on the content of the movies themselves, such as genre, cast, and keywords. By comparing a selected movie to all other movies in the dataset, the system calculates a similarity score for each pair. The movies with the highest scores are then recommended, ensuring the suggestions are relevant and tailored to the user's initial choice.
